NEWS RELEASE – FOR IMMEDIATE RELEASE

The PipeKnife® Company adds to its broad product lines with 6 New Tools Announced at Auto Glass Week 2026 (AGW)

Golden, Colorado, August 27, 2026 - The PipeKnife® Company (www.pipeknife.com and <https://autoglass.pipeknife.com>), announces six (6) new auto glass repair/replacement (AGR) tools during AGW 2026.

The Technician Kit – an affordable AGR starter kit co-developed by Industry Expert James Chapman and The PipeKnife® Company provides over 30 tools most commonly used to learn how to remove glass. This kit provides the basic tools needed to start removing glass and is designed to add other individual tools as needed as the experience level grows.

The ProSet® Setting Tool is now available in specialty colors for the socket and rod assembly. Multiple colors will be available for viewing at AGW.

The Walk Through Glass Stand Developed by industry leader Dave Copple – owner of AutoGlass Help Line and The PipeKnife® Company has licensed the design of the **Walk Through Glass Stand**. The initial production run of the heavy-duty version of this tool will be available for viewing and demonstration at AGW 2026.

The new QuickSet® 2.0 (QS2.0) Developed by PipeKnife's® own Luis Espinoza. This new design of the popular QuickSet® auto glass setting tool enhances the top glass setting system allowing for a controlled drop of the glass and rotation of the holder. Tested by multiple experienced users of the original QuickSet® tool, the new QS2.0 enhances the usefulness of this very popular setting tool.

The PipeKnife® Company has completed an agreement with AGR technician and inventor Luis Hernandez of VidrioKar for a number of new tools, including the following:

- **New Urethane Trim Tools** Makes trimming pinch welds virtually mistake free by using precise angle guides for the cutting blades.
- A line of wire cutout tools presently called **the Unknown Tool** and an agreement to resell the patent pending quarter glass wire cutout tool aka **The NutBall**. PipeKnife® Company and VidrioKar are in the process of transferring technical data and updating prototypes for the Unknown Tool family and plan to have that line of tools for sale in 4th quarter 2026.

About The PipeKnife® Company

The PipeKnife® Company, founded in 1993, is one of the largest suppliers of specialty removal and installation tools to the AGR, and building restoration industries. Over 300 professional grade tools to cut and remove old urethane and aid in installation of windshields or cut out expansion joints are manufactured and sold by The PipeKnife® Company to over 500 distributor locations worldwide.
